VERTICAL BIKE RACK

Maximise Wall Space with Compact, Secure Vertical Bike Storage

Transform underused wall space into an efficient, high-density bike storage area Designed for environments where floor space is at a premium, this vertical system stores bikes upright by the front tyre, significantly reducing the footprint required without compromising on security or ease of use. Perfect for narrow indoor areas such as bike rooms, car parks, commercial buildings, or residential developments, this solution helps declutter busy spaces while supporting secure, accessible cycle parking. It offers high-capacity bike storage even in compact settings with a minimal spacing of just 305mm between racks. Each unit includes a rear wheel/frame locking hoop (steel grey as standard) for enhanced stability and theft protection. It is ideal for cyclists who need fast, secure and convenient storage solutions.

Bikes with front-wheel mudguards are incompatible

- **Space-Efficient Design:** Stores bikes vertically against a wall to maximise available space.
- **High-Density Layout:** Bike spaced at just 305mm centres for compact installations.
- **Secure Rear Wheel Hoop:** Includes rear frame locking point for added bike security.
- **Simple Installation:** Supplied with rust-resistant fixings and bolt pack.
- **Supports Tyres up to 50mm:** Suitable for most standard and hybrid bikes.
- **British-Made Quality:** Designed, engineered and manufactured in the UK.
- **Durable & Long-Lasting:** Includes a 10-year manufacturer's warranty and 15-year rust guarantee.
- **Compatible with Other Systems:** Combine with additional vertical or freestanding racks for tailored storage solutions.

THE BIKE STORAGE COMPANY

VERTICAL BIKE RACK

Our Vertical Bike Rack is secure, economical, and easy to install, and it is designed to support bikes by the front wheel, minimising the required floor area. This rack is ideal for commercial or residential bike storage areas where every square meter counts.

Customisation that Works for You

Every site is different which is why this rack is built to adapt:

- Takes tyre widths up to 55mm
- Clear access space in front of wall: 1080mm
- Min spacing between racks: 305mm (bespoke centres available)
- Supplied with stainless steel rust resistant fixings
- Designed, & engineered in Britain backed with a 10-year warranty
- Full installation service nationwide

Lead Times

1 – 2 Weeks

PROJECT
Battersea Power Station

Battersea Power Station, a decommissioned Grade II listed landmark on the South Bank of the River Thames, has undergone a remarkable transformation. Once known for its iconic appearance on the cover of Pink Floyd's Animals, the site has been revitalised into a bustling hub of offices, residences, restaurants, and shops. Reopened in 2022, this urban rejuvenation project now offers visitors, residents, and workers a cycling-friendly environment as part of its sustainable infrastructure.

As part of the third phase of this landmark project, we were tasked with designing, manufacturing, and installing bike storage solutions that met the site's specific architectural and client requirements. Among these, the Vertical Bike Racks were crucial in optimising space. These racks were selected for their ability to store bikes vertically, dramatically reducing the floor space required while offering secure and efficient storage. With over 1,500 bike spaces created, including a range of Vertical, Semi-Vertical, and Gas-Assisted Two Tier Racks, the project significantly enhanced the site's cycling infrastructure. High-security mesh partitioning and private tenant cycle stores were also implemented to meet public and private bike storage needs. This project highlights our ability to deliver custom solutions for complex urban environments, and we were proud to contribute to this project.
