

Greenwich Cycle Enclosure Information Sheet

Greenwich Cycle Enclosure

Our Greenwich Cycle Enclosure results from a close collaboration with a leading London architect during pre-construction. The enclosure is designed to securely house our spatially efficient Semi Vertical Rack and achieve Secured by Design compliance.

The Greenwich is the popular choice where reduced height and depth are a priority without compromising security. This enclosure has various mesh and locking options, allowing you to adapt it to your needs.

We offer a range of customisation options alongside the Greenwich, including in-built PIR-sensitive solar LED lighting provisions for different access control methods and a completely green or blue roofing system with guttering.

Specification

- Secured by Design accredited
- Designed for the spatially efficient Semi Vertical Cycle Rack
- Various mesh and locking options
- PIR LED lighting option
- Sedum roofing option
- Fire retardant version available, read more here
- Designed and manufactured in Britain
- BREEAM accreditation opportunities
- 10-Year manufacturer's warranty
