Timber options breakdown

Sapele

A durable hardwood that is a popular alternative to mahogany, offering a luxurious and high quality finish that's built to last. Darkens slightly with age.

Larch Timber

Larch's natural resin provides an inbuilt resistance to decay, making it a durable solution for timber bike shelters. Attains a subtle silvery-grey look over time.

Thermopine

This innovative timber offers great stability, reduced warping risk and durability thanks to its unique heat-treated processes. Will mellow over time to a silvery-grey.

Black Thermopine

Combine the substantial benefits that heat processed Thermopine timber provides with a striking black stained finish with limited ageing. Charred option also available.

Euro Class
B/C

Euro Class B/C

By selecting Euro Class B/C timber, you ensure the peace of mind that comes with a higher degree of fire protection. Colour will mellow with time.

Treated Softwood

Choosing our treated softwood option ensures a high level of sturdiness for your shelter at a pocket friendly price. Fades from a honey blond to a silvery-grey over time.

Western Red Cedar

Achieve an attractive external cladding with extremely high durability and decay resistance, creating a memorable shelter. Ages to a deep silvery-grey.

Canadian Red Cedar

A dense and sturdy softwood option, this is a beautiful cladding option that is incredibly stable. Also ages to a deep silvery-grey over time.

Composite Cladding

Elegant and low maintenance, composite cladding offers weather resistance whilst minimises the risk of discolouration, warping and splintering.
