

E-Bike Cycle Shelter Information Sheet

E-Bike Cycle Shelter

Designed and built for e-bike cyclists, this shelter offers riders an easily identifiable place to stop and securely charge their electric bikes undercover.

The e-Bike shelter can be fully customised to suit your requirements. Our standard model comes as an open-fronted shelter but we also provide enclosed options.

Five E-Bike Charging Stands can be accommodated per E-Bike Cycle Shelter as standard (charging 10 bikes) but we can also offer bespoke volumes and mixed storage options.

- Lockable access panel and secure locking bar to prevent theft
- Easy, safe and convenient for cyclists to use
- Expands cycling possibilities, reducing congestion and pollution

Specification

Each E-Bike stand requires a power supply to the location of the stand, this can be either directly under the stand and be discretely fed through the unit, or cabling can enter from the rear of the unit. Standard power supply to be 230V AC and up to 13 amps.

Each stand has two 1-Gang IP66 rated outdoor switched sockets and should be connected to an existing consumer unit or to a new separate consumer unit. Please note that we do not connect the units to your power supply, a qualified electrician should be sought for this.

- Dimensions: 4100mm W x 2100mm D x 2100mm H
- Galvanised Steel to BS EN ISO 1461 : 2022
- Optional polyester powder coated framework
- Made in Britain
