

Turl Cycle Shelter

The Turl Cycle Shelter utilises structural engineering concepts to deliver a versatile design that adapts to any space.

This shelter can be extended infinitely to meet the requirements of any site and comes equipped with a range of excellent features. It can also support our two-tier bike rack range, offering you the opportunity for high density bike storage.

The Turl Cycle Shelter was developed in collaboration with an Oxfordshire-based structural engineering firm, resulting in a stable and robust structure that is supported by heavy-duty cross-bracing between upright steelwork.

As the shelter can also support a sedum roof system, you can easily increase its eco-friendliness and support your local biodiversity.

Specification

The shelter's highly stable design can be extended infinitely, with no limits on length or height. Made in Britain and BREEAM accredited.

Key product details:

- Infinitely extendable
- Accommodated two-tier racks
- Manufactured from BS EN 10219-2 structural steel
- PPC to a selection of RAL colours
- Made in Britain
- 10-year manufacturer's warranty
- Assists with BREEAM accreditation
- Contact us for a free quotation
