THE BIKE STORAGE COMPANY

Fabricating High-Quality,
Cost-Effective Bike Storage,
Made in Britain.

SECURED BY DESIGN TWO TIER CYCLE RACK

Sold Secure Silver Certified and Police Preferred Specification Approved

The Secured by Design Two Tier Cycle Rack is the specification-ready choice for projects where independently accredited, high-capacity cycle parking is a planning requirement or client brief. Built on a robust steel framework with reinforced locking hoops and a 3mm plate cover to the inner and outer gap, it carries Sold Secure Silver accreditation and Police Preferred Specification status under the official Secured by Design initiative. Independently tested against defined tool attack, it provides a clear, auditable compliance route for architects and specifiers working to SBD guidelines or local planning conditions. Two locking hoops welded together to create a 10mm thick plate, increased material thickness to end caps, a 5mm rear end cap and security fixings with armour rings to all fixing points deliver layered attack resistance across every installation.

- **Sold Secure Silver Accreditation:** Independently tested and certified against defined tool attack, providing documented evidence of attack resistance and a clear compliance route for SBD
- **10mm Plate Additional Locking Hoop:** Two locking hoops welded together to create a 10mm thick plate, significantly increasing resistance to lever and forced-separation attack at the most vulnerable point of the rack
- **3mm Gap Cover Plate:** A 3mm plate covers the gap between the outer and inner rail, eliminating an attack vector and preventing tool insertion between components
- **Security Fixings with Armour Ring Caps:** Applied to all fixing points to prevent bolt removal and resist ground-level displacement across every installation
- **Made-in-Britain:** Backed by a 10-year warranty
